## ETF 2005 – Home Media Server

Kai Scheffer, Director Media Home  
Consumer Products

## About Micronas

- u Leading supplier of consumer audio and video solutions
- u Publicly listed in Zurich SWX and Frankfurt (TecDAX)
- u Sales 2004 Q1-Q3 CHF 739M
- u 1900 employees
- u Operational Headquarter in Germany
- u World wide sales offices including Taipei, Japan, Korea, Hong Kong, China, Singapore, Malaysia

## Recent History - Audio

- u The PC has revolutionized consumer Audio with MP3
  - ▶ First it was all about ripping and burning CDs
  - ▶ ... then it was portable audio devices (Flash Storage)
  - ▶ ... then it was about streaming and connecting to CE
  - ▶ ... still the PC is a center piece for storing and managing MP3 files
- u The future will be accessing content via a network
- u Can we learn from this development for Video?

## Video follows Audio

u Despite the fact that Video could not be consumed during jogging we still have a lot of similarities:

- |                  |   |                     |
|------------------|---|---------------------|
| ▶ Audio Cassette | – | Video Cassette      |
| ▶ FM Radio       | – | TV Broadcast        |
| ▶ CD Audio       | – | DVD Video           |
| ▶ MP3 Audio      | – | MPEG-2/4, DivX, WMV |

## Where are we now with Video?

- u DVD ripping, burning
- u Broadcast recording, time shifting
- u Broadband Internet, home networks
- u Increasing number of CE devices need connectivity via network
- u ... and the PC is the center of all this

Watch one Video while  
Recording another (PiP)

ATV & DTV Sources

Dual Input Streams  
SD/HD Video Sources

Time Shift Recording  
to Hard Drive

# Micronas Entertainment PC Solutions

- u Micronas targets strong growing EPC Market
- u Leverages from existing consumer TV product expertise
- u Drive quality products into PC market
- u Integrating the consumer TV into the PC world
- u PCI Express as the technology of choice to interconnect these worlds

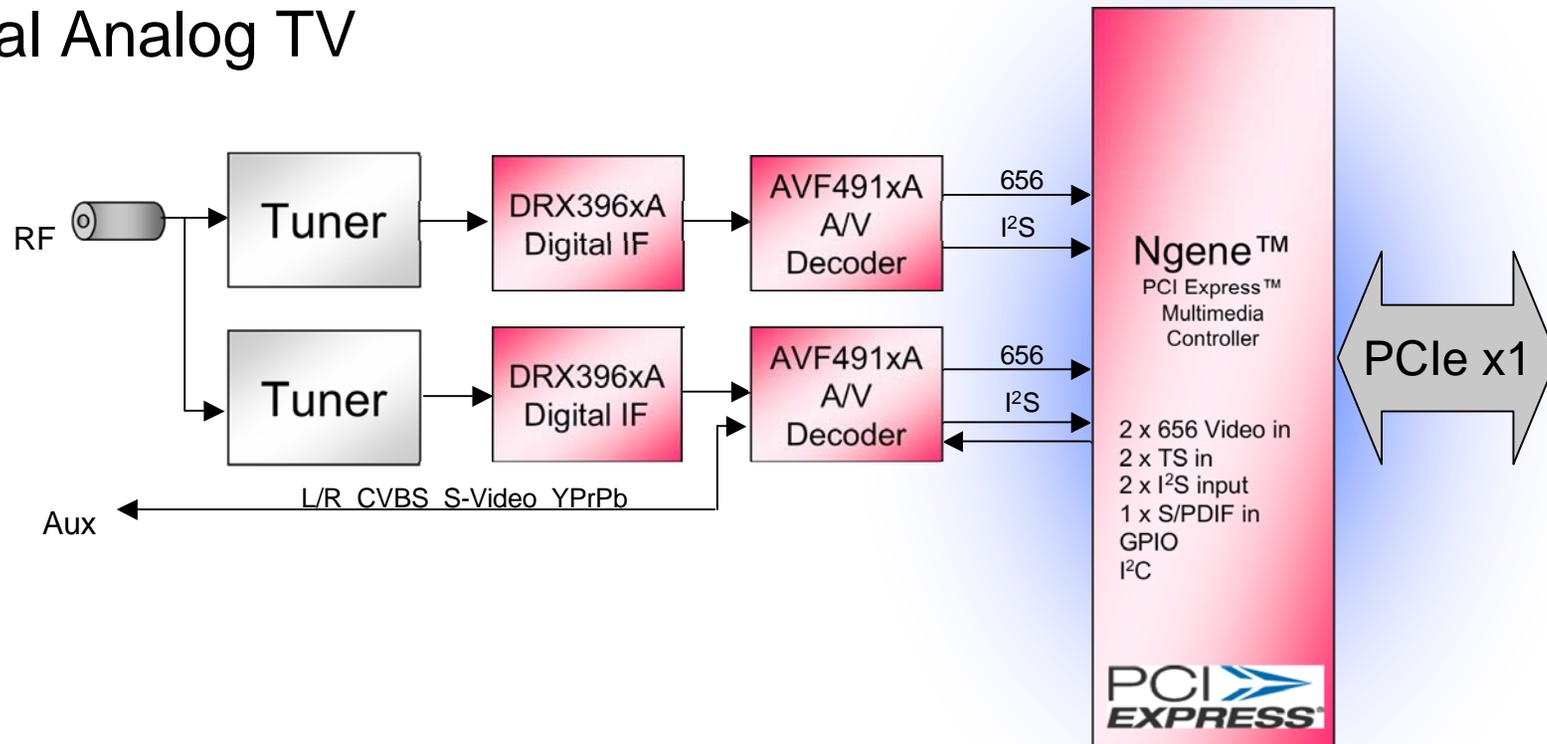

# Ngene™ PCI Express TV-Tuner Solution

- u World's first PCI Express Multimedia Controller
- u True dual channel A/V streaming
- u Enables simultaneous recording and live caching

# Scalable Solution for TV Tuner with PCI Express™

## Dual Analog TV

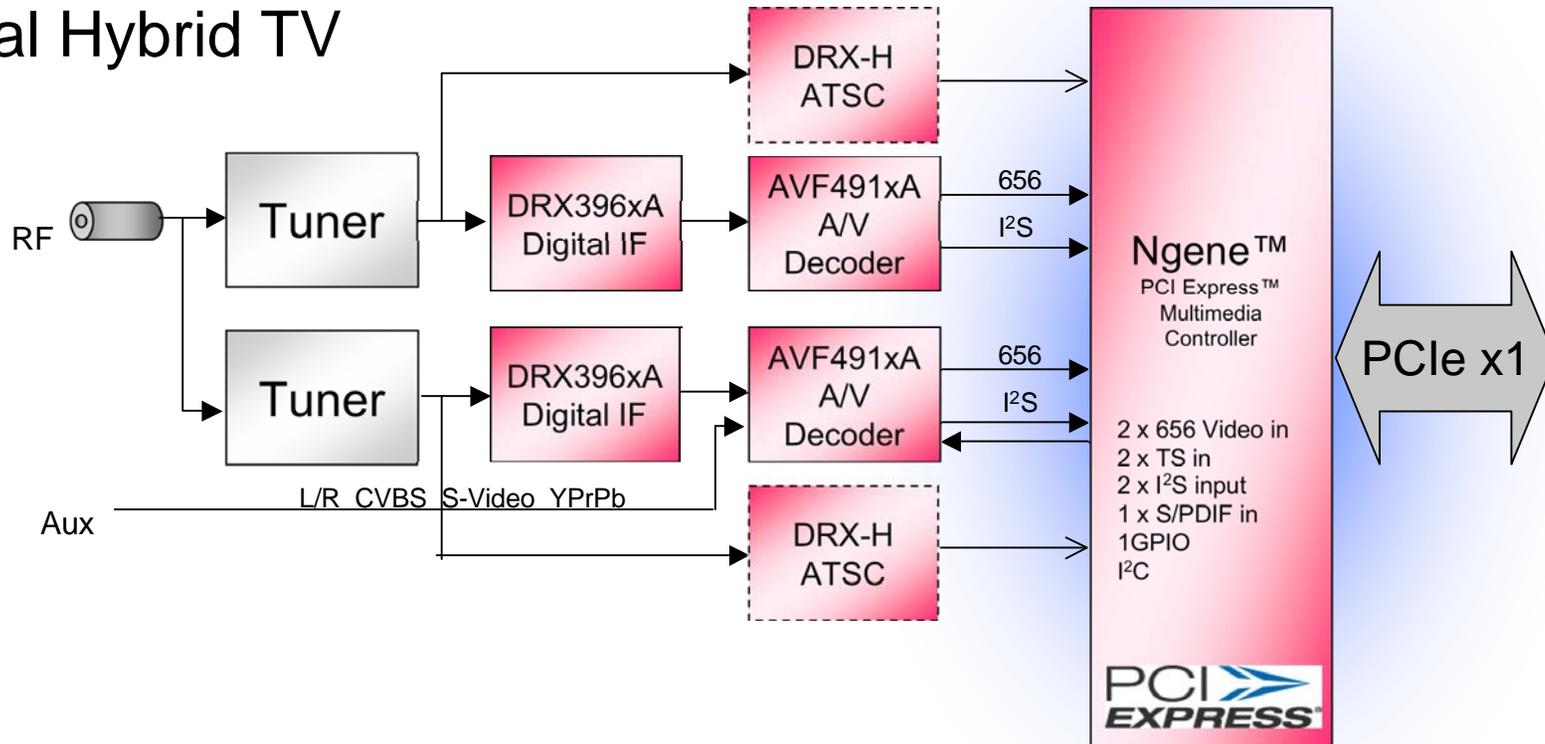

**PCI Express™ Enables Multi Stream Video**

# Scalable Solution for TV Tuner with PCI Express™

## Dual Hybrid TV

**PCI Express™ Enables Multi Stream Video**

# System Integration

- u 2 in 1 solution: Integrates 2 PC-TV card functions
- u Perfect Audio/Video synchronization
- u Digital Stereo Audio decode and capture for all standards  
BTSC, SAP, A2, FM, Nicam
- u CVBS, S-Video, Component (480i/525i) Video input support
- u Dual Transport Stream for ATSC, DVB
- u Line Audio and S/PDIF support

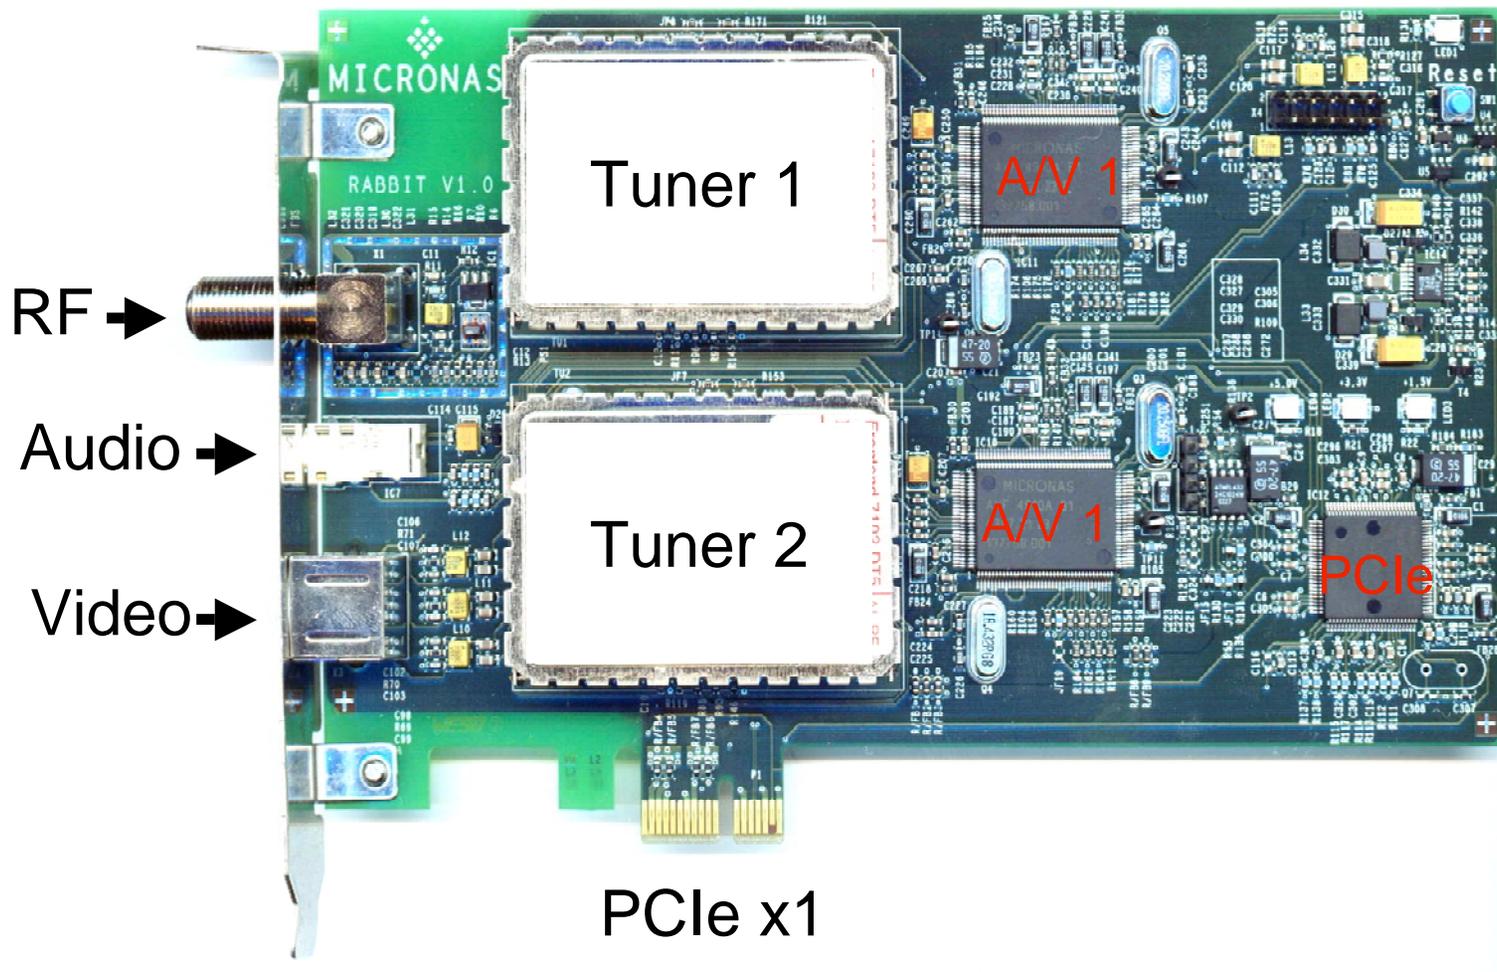

## Why we need PCI Express:

- u PCIe is much faster than PCI
  - ▶ Allows multi stream video
  - ▶ Each PCIe slot does have dedicated bandwidth not shared with other PCIe slots
  - ▶ Does not stall the CPU or System (33MHz PCI clock = 100 CPU clock cycles)
- u Less pin count allow for smaller motherboards
- u Small form factor PCs are limiting # of slots

# Dual Channel PCI Express TV Tuner Card

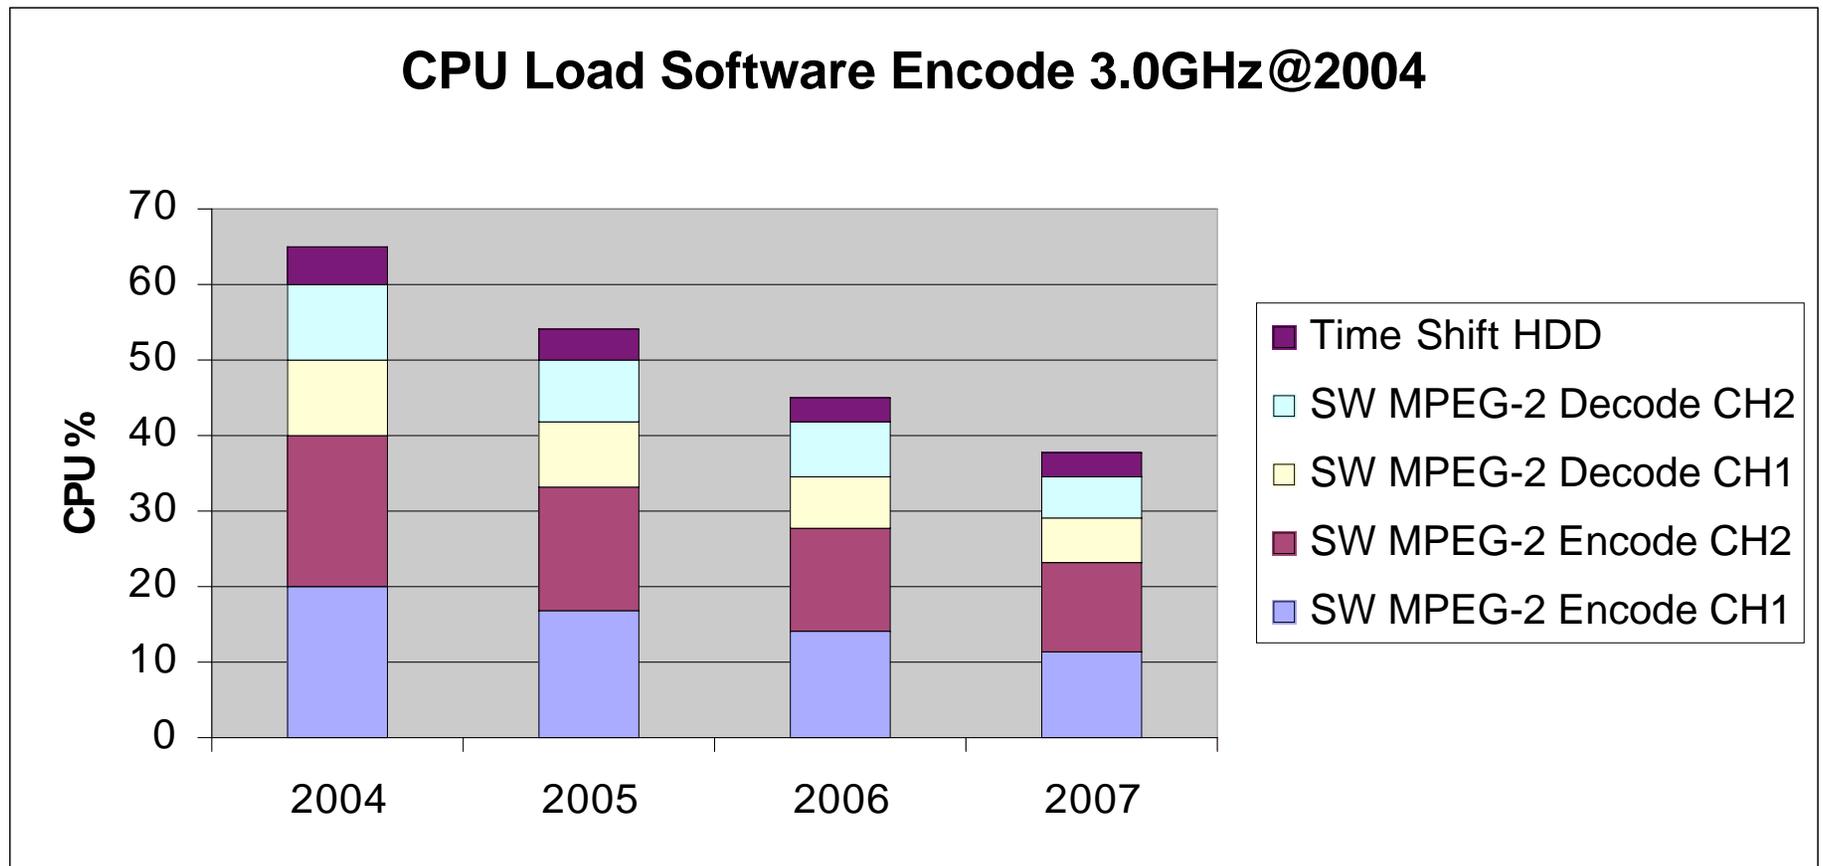

# Software Encoding for Analog Content

- u PCI Express enables streaming of uncompressed multi channel video
- u Configurable software compression specific for each application or needs
- u MPEG-2, MPEG-4, DivX, WMV, ....

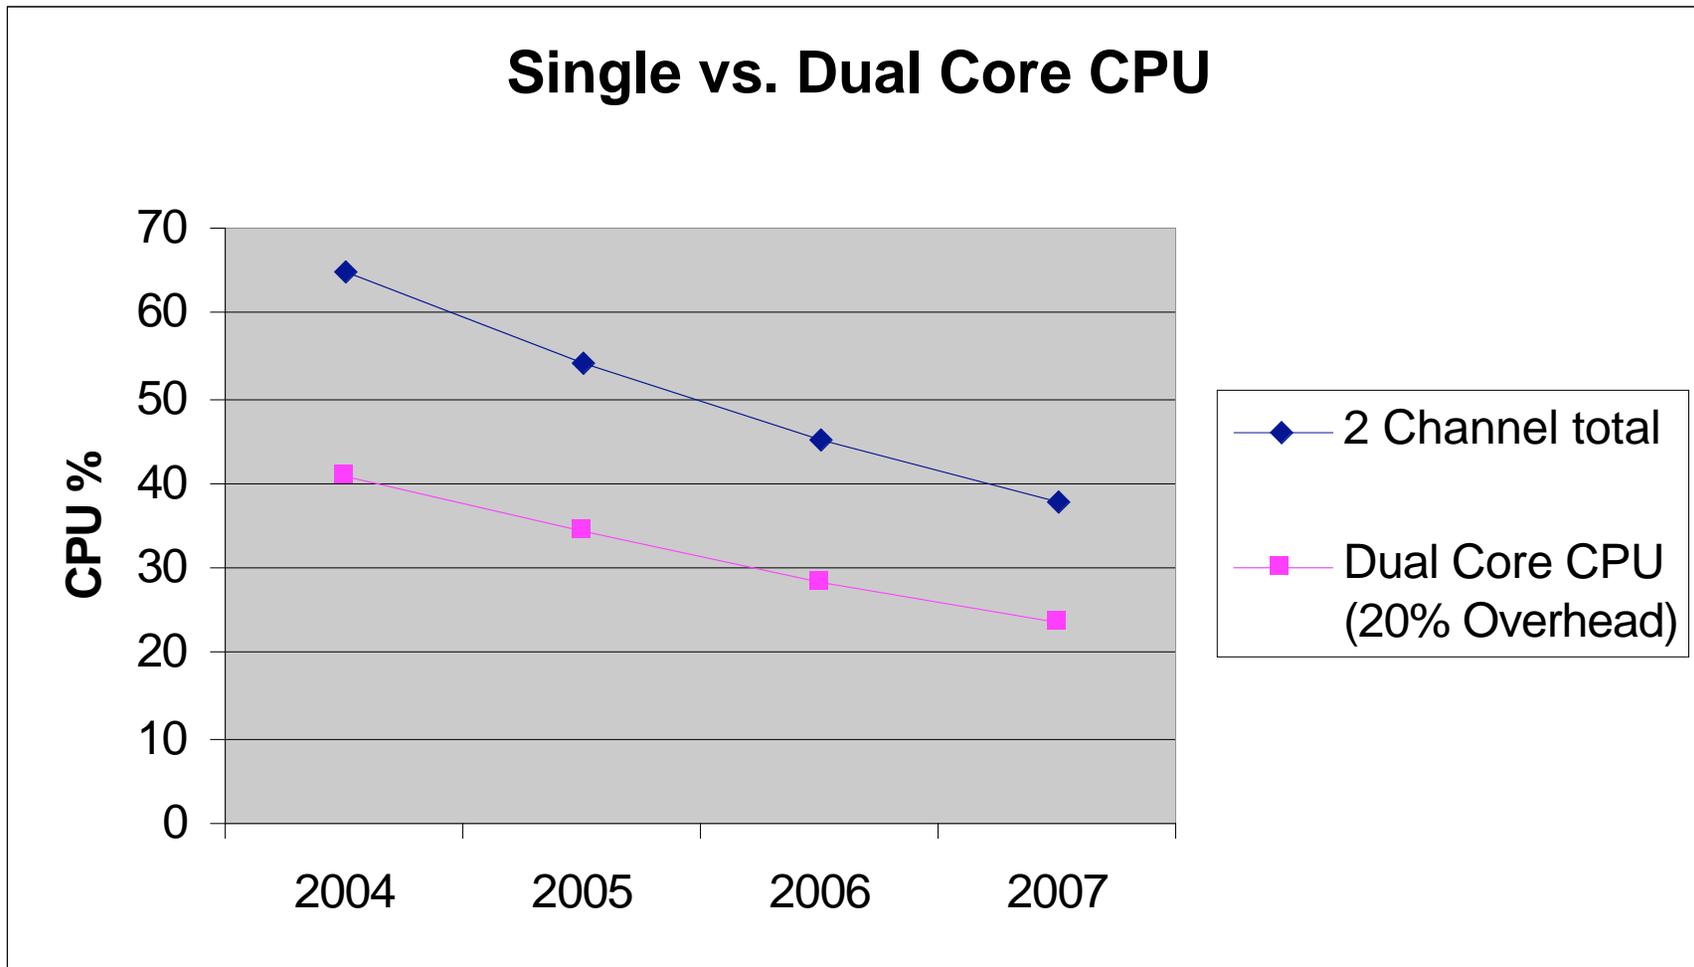

# CPU Load Considerations

# Single vs. Dual Core CPU

## Micronas - CES 2005

- u See live demo at Micronas  
LVCC South Hall 4, Booth 35628
